CAPABILITIES

KNOW FIRST. ACT FIRST.

LAW ENFORCEMENT

Understanding the relationships between criminals and the fluid nature of their relationships and their activities is exceptionally demanding on scarce resources. Worldstack's unique machine learning solutions provide the computing power and accuracy to pull data from available sources and distill from it actionable insight.

CRIME PREVENTION

Knowing where criminals are about to strike through detecting chatter about potential activities gives you clear visibility so you can ascertain hot spots for deployment of resources. [Providence](#) - Worldstack's flagship OSINT solution - monitors criminals and their known associates, and along with our Analyst team, presents a dashboard of actionable intelligence.

CRIME RESPONSE

Imagine having a dashboard in the wake of criminal activities showing you those potentially involved and the priority for investigation, and links to the conversations they were having - even when they thought they were protected. Imagine if you could see not only the likely suspects, but also details about a crime that link directly to prosecution. Providence can provide these insights and allow you to respond faster and with more assurances that a conviction will succeed.

COUNTER-TERRORISM

Worldstack's ability to process oceans of data and find previously unknown links between threat actors and the capability to track known groups and group members is a new paradigm in how law enforcement agencies can deal with terrorism.

Our solutions can detect changes in the behaviours of known suspects and discover new groups, members, and even new methods of communication.
